Hey Rick –

To confirm: we are also good with the Single Reinstatement, correct?

Thanks,
Tiago

Matt,

Coming to you due to this being a 2-year program. Note they are making this a ground up A-side program and pricing is to allow for the markets to get some payback here.

Let me know if you have any questions.

Thanks,
Paul

Tough risk, however Side A is a much better play here. Additionally the stretched agg makes it a lot more palatable.

I support the recommendation(s). Outside authority due to limits/2 yr deal.

Subject: Boeing - Renewal Authority Request 11/1/2025

Hey Rick -

Working with Courtney Hiatt from Aon Chicago on this account. They are converting the entire tower into a Side A tower only. The broker is looking to build as much of it in $15m limit and 2-year stretched agg. An opportunity has occurred for us to put up a 2 year stretched agg. $15m limit attaching between $150M and $180M for a premium of ~$1.8M for the 2-year term.

The lowest potential attachment for Ironshore is the 15 x 150 which the broker is are targeting annual pricing of $952k or $1,904,000 for the 2-year stretched agg.

I have spoken to Lynn Richardson, which advised that we have decreased our relationship with Boeing as Casualty took a negative stance at renewal, she was unable to provide in depth detail at the time of the call.

As we know, Chubb dropped down on from the First excess to primary as Zurich is adamant the second claim is interrelated to the prior safety issues.

- AIG then dropped down from the $15m x $75m to $15m x $15m.
- SwissRe at the $15m x $60m is removing all of their relationship with Boeing on all lines of business. Allianz took the $15m x $60m.
- Markel and Berkshire are dropping down one layer.
- Axis and Travelers have advised that they will only put up a $10m limit for a 2 year deal.
- Everest advised they will only put up $10m

The broker is expecting all layers to have:

- DIC of DIC wording on each layer
- Follow form to 1x reinstatement on each layer
  - Reinstatement Wording:
    - (a) In the event the Limit of Liability of this POLICY is exhausted, this POLICY's Limit of Liability shall be reinstated in the amount set forth in Item III of the Declarations, FIRST REINSTATED LIMIT OF LIABILITY, solely for LOSS incurred by INSUREDS as defined in Clause 2(k)(1), Definitions. Such FIRST REINSTATED LIMIT OF LIABILITY shall not apply to any CLAIM for which there has been any payment of LOSS under the Limit of Liability of this POLICY or any other CLAIM based upon, arising out of or related in any way to such CLAIM, and such FIRST REINSTATED LIMIT OF LIABILITY shall be excess of amounts payable under all other insurance policies that are specifically excess of this POLICY and all UNDERLYING INSURANCE providing a similar reinstated limit of liability

Boeing's management discussed the impact of tariffs and recent trade agreements on its business during the second quarter of 2025. The company noted that the trade environment has been dynamic, requiring ongoing monitoring of policy developments and mitigation of tariff risks as negotiations continue. About 80% of Boeing's commercial supply chain spending is with U.S. suppliers, while approximately 80% of commercial deliveries are to customers outside the U.S., underscoring the importance of free trade to its operations. Boeing emphasized that ongoing free trade

is critical for its business as a leading U.S. exporter, and it is actively working to promote continuity of supply and manage supplier performance in response to strong market demand. The company also indicated that the financial impact of input tariffs has been less than $500 million, with some resolutions achieved through negotiation agreements such as those between the U.S. and the EU, the U.K., and Japan, which included a “0 for 0” approach (no input tariffs) that will benefit future operations. While Boeing feels better about the current environment thanks to these agreements, it remains vigilant about potential retaliatory tariffs, especially with China and ongoing negotiations with Italy and under the USMCA agreement. Management believes that if the “0 for 0” trend continues, the company could outperform its established $500 million tariff impact target. Overall, Boeing is optimistic that future agreements will further benefit the aerospace industry, help manage input costs, and support its diverse global backlog, which is valued at more than $600 billion.

Boeing faced several headwinds during the second quarter of 2025, as outlined in the earnings call and management remarks.

- Dynamic Trade Environment and Tariffs: The company continued to navigate a “dynamic environment” in global trade, with ongoing policy developments and tariff risks that required active management and mitigation strategies. Although recent trade agreements have provided some relief, Boeing remains vigilant regarding potential retaliatory tariffs, especially related to China, and is closely watching developments with Italy and the USMCA agreement, given its reliance on imported components from those regions. Input tariffs have impacted the business, but management believes the financial effect has been kept under $500 million and may improve further with continued trade negotiations and “0 for 0” agreements.
- Production and Supply Chain Stability: Boeing acknowledged the remaining work ahead in its recovery plan, citing the need to stabilize its business and production system. The company has faced challenges in ramping up production rates, particularly for the 737 and 787 programs, and continues to manage supplier performance and buffer inventory to promote stability amid strong market demand. Stabilizing operations and ensuring quality have been ongoing priorities, with structured training, process simplification, and investments to support future increases in production rates.
- Certification Delays: Technical challenges have led to delays in the certification of certain aircraft models, notably the 737-7 and 737-10 variants. The solution for engine anti-ice has taken longer than anticipated due to additional engineering work required, resulting in the expected certification being moved to 2026. Management does not expect material impact on production plans but acknowledges modest financial consequences reflected in program margins.
- Negative Margins in Commercial Segment: Despite improved delivery volumes, Boeing’s commercial airplane segment continued to post negative operating margins, though these are expected to gradually improve as production rates stabilize and supply chain buffers normalize. The path to historical margin levels will require continued operational recovery and execution.
- Labor and Strike Risks: In its defense business, Boeing faced some strike risk related to work stoppages among fighter and munitions employees, though the scale was much smaller than previous events. Management expressed confidence in its ability to manage through these disruptions.12

Overall, these headwinds—trade and tariff uncertainties, production stabilization, certification delays, margin pressures, and labor risks—are significant but are being actively managed as part of Boeing’s recovery and long-term strategy.

Going to a Side A decreases the exposure on this risk tremendously, although given the company characteristics exposure still exists given it's recent headwinds any mechanical issues. I recommend ok to support the $15m x $150m-$180m 2-year stretched aggregate limit for a Side A tower at the expected premium.

About the company:

- The Boeing Company, together with its subsidiaries, designs, develops, manufactures, sells, services, and supports commercial jetliners, military aircraft, satellites, missile defense, human space flight and launch systems, and services worldwide. The company operates through three segments: Commercial Airplanes; Defense, Space & Security; and Global Services. The Commercial Airplanes segment develops, produces, and markets commercial jet aircraft for passenger and cargo requirements. The Defense, Space & Security segment engages in the research, development, production, and modification of manned and unmanned military aircraft and weapons systems; strategic defense and intelligence systems, which include strategic missile and defense systems, command, control, communications, computers, intelligence, surveillance and reconnaissance, cyber and information solutions, and intelligence systems; and satellite systems, such as government and commercial satellites, and space exploration. The Global Services segment offers products and services, including supply chain and logistics management, engineering, maintenance and modifications, upgrades and conversions, spare parts, pilot and maintenance training systems and services, technical and maintenance documents, and data analytics and digital services to commercial and defense customers. The Boeing Company was incorporated in 1916 and is based in Arlington, Virginia.

- Boeing's financial performance for the second quarter of 2025 demonstrates significant improvement driven largely by a surge in commercial aircraft deliveries and enhanced operational execution. The company reported revenue of $22.7 billion, representing a robust 35% increase compared to the previous year, primarily attributed to higher delivery volumes in its commercial segment. This uptick in activity led to a core loss per share of $1.24, which, while still negative, marks a notable improvement from last year, reflecting both increased deliveries and operational gains across the business units. Free cash flow usage for the quarter stood at $200 million, a result that surpassed expectations due to both higher commercial delivery volumes and a more favorable mix of wide-body aircraft, alongside timing benefits in capital expenditures. The company's liquidity remained strong, ending the quarter with $23 billion in cash and marketable securities, and it continued to reduce its debt, which finished at $53.3 billion after paying down maturing obligations. Boeing's commercial division delivered 150 aircraft during the quarter, generating $10.9 billion in revenue, though the segment's operating margin remained negative at minus 5.1%. The negative margin is expected to gradually improve quarter by quarter as production rates stabilize and supply chain buffers normalize. In defense, space, and security, Boeing booked $19 billion in new orders and generated $6.6 billion in revenue, with operating margins climbing to 1.7% thanks to improved contract management and cost controls. The global services segment maintained its strong performance, posting $5.3 billion in revenue and a standout operating margin of 19.9%, supported by double-digit margins in both commercial and government services. Overall, Boeing's financial results this quarter reflect both the positive impact of increased commercial deliveries and the benefits of disciplined operational management, supply chain stabilization, and strategic contract execution in defense. These factors together have buoyed the company's cash flow and positioned it for further recovery as it works to return to historical margin levels and sustain long-term growth.

Management:

- Robert K. Ortberg - President, CEO & Director - Robert K. Ortberg, also known as Kelly, was Director of Raytheon Company until 2024. He has been a Director of Aptiv PLC since September 13, 2018. Revolver:

Facility Type	Amount	Expiry	Status
Revolving Credit (3-year, Aug 2025)	$3.0 B	Aug 2025	Unused
Revolving Credit (5-year, Aug 2028)	$3.0 B	Aug 2028	Unused
Revolving Credit (5-year, May 2029)	$4.0 B	May 2029	Unused
Total Unused Revolving Credit	**$10.0 B**		**Unused**

Litigation:

- Per most recent 10Q or 10K:
  - 737 MAX Accidents and Related Proceedings
    - Multiple legal actions, investigations, and inquiries were initiated concerning the October 29, 2018, Lion Air Flight 610 accident and the March 10, 2019, Ethiopian Airlines Flight 302 accident. Many legal actions and investigations have been resolved, but others are still pending, including civil lawsuits and claims by family members of those who died in the accidents. A motion to certify a plaintiff class is also pending in a federal securities class action related to the accidents and the subsequent 737 MAX grounding.
    - On January 7, 2021, Boeing entered into a Deferred Prosecution Agreement (DPA) with the U.S. Department of Justice (DOJ) regarding the investigation into the 737 MAX evaluation by the FAA. The DPA's three-year reporting period ended in January 2024. In May 2024, the DOJ determined Boeing did not fulfill its DPA obligations and would not move to dismiss the case. On May 29, 2025, Boeing and the DOJ reached a non-prosecution agreement, and the DOJ filed a motion to dismiss the criminal information. A hearing is scheduled for September 3, 2025, as some family members' representatives have opposed the dismissal.

        - Under the non-prosecution agreement, Boeing will pay a $244 million fine, invest at least $455 million in compliance, quality, and safety programs over three years, retain an independent compliance consultant, and provide $445 million in additional compensation to the families of accident victims. The $445 million compensation was accrued and expensed in Q2 2025; the $244 million fine was accrued and expensed in 2024. Escrow accounts for these amounts will be disbursed if the court dismisses the criminal information
- 737-9 Door Plug Accident
    - Multiple legal actions and governmental/regulatory investigations have been initiated as a result of the January 5, 2024, 737-9 door plug accident and the grounding of certain 737-9 aircraft. Boeing cannot reasonably estimate a range of loss, if any, not covered by insurance and in excess of accrued amounts that may result from pending lawsuits, investigations, and inquiries related to the 2018 and 2019 737 MAX accidents and the 2024 737-9 door plug accident.

- Per SCAC:
    - Filing Date: April 08, 2019 - ONGOING
        - According to the Complaint, on March 15, 2019, Boeing filed its 2019 proxy statement (the "Proxy Statement"). The Proxy Statement seeks: (i) the election of all 13 director nominees constituting the entire Boeing board of directors (the "Board"); (ii) approval, on an advisory basis, of named executive officer compensation; (iii) ratification of the appointment of the Company's independent auditor; and (iv) certain shareholder proposals that the Board has recommended shareholders vote against, including the appointment of an independent Chairman. The Complaint alleges that the Proxy Statement is materially false and misleading because it fails to disclose the recent crippling events and circumstances that have shaken the Company to its core, subjected the Company to virtually unlimited civil and criminal prosecution and investigation, grounded its most innovative and profitable fleet of 737 MAX jets, and, among other things, left the Company scrambling to fix its most advanced automated flight systems and controls that both paralyzed its fleet and unveiled an air of secrecy and disinformation surrounding the introduction of this fleet without the necessary warnings to and training of pilots before introduction of the new utomated systems incorporated into the design and engineering of this fleet and the method for stabilizing a plane experiencing a malfunction of these automated systems. This case was voluntarily dismissed on April 29, 2019. A related case continues under Docket 19-CV-02394 in the Northern District of Illinois. On June 21, 2019, the Court issued an Order consolidating cases. All future docketing was ordered to be done in the lead case 19-CV-02394. On November 15, the Court issued an Order consolidating cases and appointing Lead Plaintiff and Counsel. Lead Plaintiff filed a consolidated Complaint on February 14, 2020. Defendants filed a Motion to Dismiss the consolidated Complaint on June 30. On August 23, 2022, the Court issued an Order granting in part and denying in part Defendants' Motion to Dismiss. Lead Plaintiff was given leave to amend the Complaint. On September 12, 2023, Lead Plaintiff filed an amended consolidated Complaint. Defendants filed a Motion to Dismiss the amended consolidated Complaint on October 16. On September 30, 2024, the Court issued an Order granting in part and denying in part Defendants' Motion to Dismiss.
    - Filing Date: January 30, 2024 - ONGOING
        - The Complaint alleges that throughout the Class Period, Defendants made false and misleading statements about the Company's safety and quality efforts. The Complaint further alleges that Boeing failed to disclose that it had been prioritizing its profits over safety, which led to poor quality control standards in the production of its commercial aircraft such as the 737 MAX, resulting in a heightened risk of manufacturing flaws which could render the Company's new airplanes unsafe. The Complaint asserts that the Company's allegedly false and misleading statements caused Boeing stock to trade at artificially inflated prices during the Class Period. On April 22, 2024, the Court issued an Order appointing Lead Plaintiff and Counsel. Lead Plaintiff filed an amended Complaint on May 22. Defendants filed a Motion to Dismiss the amended Complaint on June 21. On September 6, 2024, the Court issued an Order denying Defendants' Motion to Dismiss. On December 13, 2024, Lead Plaintiffs filed a Motion for Class Certification. On March 7, 2025, the Court issued an Order granting in part the Class Certification Motion.
- Per Loss Runs:
    - NEWSPC000573257 - OPEN - Total Paid: $77,775
        - Securities class action complaint filed against Boeing and certain of its directors alleging violations of federal securities law including violation of section 10(b) of the Exchange Act of 1934 against all defendants and 10b5 thereunder and violation of section 20(a) of the Exchange Act against the Individual Defendants related to the stock drop that followed the door plug incident on 1/5/24 that caused the Max 737 model to lose a piece of the door in flight resulting in a hole in the aircraft and causing an emergency landing. The class period is from 10/23/19-1/24/24 beginning when Boeing began representing safety importance following the 2018 crashes through the filing of the action.
            - Waiting to hear more info from Arlene.
